

Adusta Penta Shad 2" (5 cm)

Proizvođa / Brand: Adusta

Šifra proizvoda / Code: 314012

Raspoloživost / Availability: Na zalihi / In Stock

Cijena / Price: ~~6,75€~~ 6,08€

Opis / Description

8 pcs in pack

Adusta Penta Shad ima pokrete i akciju poput swimbaita. Tijelo ovog silikonca u presjeku je trokutastog oblika što mu daje stabilnost pri plivanju. Rep je oblika suze i počinje raditi čim dotakne vodu. Penta Shad ima glavu zakrenutu malo prema dole te kada tako pliva imitira omamljenu ribicu koja pokušava pobjeći u dublje krajeve. Tanko tijelo i manji repovi daju mu užu i mirniju akciju. Silikon od kojeg je napravljen Penta Shad je nadipnan i posoljen. Može se koristiti za ribolov na moru i slatkim vodama, mirnim i tekućim. Jig glave, otežane i neotežane wormice, Texas, Carolina, sve su to mogućnosti za montažu Penta Shada.

An aggressive wave motion and wobbling action similar to a swimbait.

The [Penta Shad] has a small body and was developed with the goal of combining lifelike action with a great wobble similar to a swimbait. Thanks to the triangle shaped body, like the keel of a ship this bait is able to move through the water with a stable swimming action. By designing the base of the tail to be thinner, the dimensions of this body are unique and allow for an exceptional tail action as it wobbles from side to side. By swimming with the head slightly down, the bait imitates a weak bait fish struggling to escape to deeper water. The tail is a teardrop shape and is set into motion immediately upon touching the water. The thickness of the bait, combined with its keel shape, enables it to move efficiently through the water easily and not be distorted during the return. The raw materials used in the construction of this bait are dense, providing perfect balance and castability. Using the right materials is crucial for ensuring the bait has the perfect tight action when the tail is engaged throughout the retrieve. We sought the perfect shape

and weight balance that allows the bait to make a fluttering action when the retrieve is paused, flawlessly imitating a baitfish falling through the water column.
