Opis / Description

Pterophyllum scalare

51cm

The Freshwater Angelfish (*Pterophyllum scalare*) is a popular aquarium fish and member of the cichlid family. It is a native of the tributary system of the Central Amazon. It is quite tolerant of other species in the aquarium and enjoys the company of other angelfish. Ideal conditions for angelfish include a spacious tank with vegetation and water temperatures of 24-26 degrees Celsius. Angelfish prefer live feed as small larva or plankton
