Opis / Description

A combination of fast sinking and pausing will mesmerize your target!

Tetra jig was created to target those fish spooked with soft plastics or hard-bodied lures and to reach those depths, which were out of range for your ordinary micro lures. It is a productive lure to search a vast area with a wide variety of colors available.

It is a center-balanced jig designed to reduce line trouble and increase controllability with a fish like design.

Anglers will be able to cast this micro jig great distances. It will perform a sharp action with a quicker twitching retrieval on the surface. For deeper areas, it will sink horizontally appealing to the fish with a fluttering motion.

A combination of fast sinking and pausing will mesmerize your target. It is most efficient for those wary fish reluctant to bite soft plastics or the usual hard-bodied plugs around break waters and tetra pods. A new era has begun for the micro jigging game.
