### Opis / Description

The Keen jig is a lure with great aerodynamics thanks to the tapered body. The off-centre balance allows a harmonious movement in retrieval and fluctuating in fall, very similar to how baitfish swim. Therefore it is great for fishing on the “mangianze” (baitfish breaking the surface).

You can use it both from the shore and from the boat, to attract all predators either with vertical techniques or with horizontal or sawtooth retrievals. Tuna, Bluefish, Atlantic Bonito, Common Dolphinfish, Sea Bass and Snapper.

Any predator you can think of will not be able to resist!
