Opis / Description

A new hybrid bait developed by Molix, with the contribution of Carl Jocumsen, Australian-USA Pro Angler, expert and talented frog angler. It was conceived by exploiting the hydrodynamics and the buoyancy of the realistic body of a classic frog bait. The double tail made of a high density mixture creates high frequency vibrations. The two parts of the bait are joined by a solid mechanism fixed in the back part of the body of the frog. The fastening system allows a quick and precise assembly and the possibility to use customized tails of any type and shape. The inward-facing appendages can move during the retrieval phases like a true propeller. It lends itself to slow and fast retrieval over the vegetation or also to powerful jerks-strokes. The Supernato Frog is armed with a double and strong OMTD Custom hook.
