Opis / Description

Sepioteuthis australis

76cm

The southern calamari or southern reef squid (*Sepioteuthis australis*) is a popular member of the Loliginidae family (the pencil squids). It can be found in coastal waters up to some 10 meters in depth in sandy or grassy areas of the subtropical Indo-Pacific region. As its cousins, the cuttlefish and octopuses, and other squids, the southern calamari is an excellent predator and can change its color.
