

Intech MicroN PLUS PE X4 150 m

Proizvođa / Brand: Intech

Šifra proizvoda / Code: 55719

Raspoloživost / Availability: Na zalihi / In Stock

Cijena / Price: 10,00€

Opis / Description

Intech MicroN PLUS PE X4 - was carefully selected for the range of the Intech brand, testing and selection took place for more than six months for a number of fundamental properties.

The main selection criterion was the high quality of the product, at the level of Japanese cords, and the maximum suitability of this cord for use in heavy jig, fishing with large wobblers and medium and large weights.

We can say with confidence that this task was accomplished brilliantly: after testing for abrasion, compliance with the declared diameter and strength indicators, Intech MicroN PLUS showed the highest results in all parameters. Primary raw materials are used in the production of cord, which gives a consistently high and, most importantly, stable quality of the finished product. This braid for fishing is one of the most technologically advanced and profitable offers on the market in the budget segment. The line has a reel of 150 and 100 meters and is suitable for fishing triple fish.

Thus, the MicroN PLUS line is a logical continuation of the MicroN line of lines, and the smooth and uniform structure of the line preserves the casting range and sensitivity of the MicroN line. The color fastness to washout is not due to painting, as on many budget cords, but to a special impregnation with the addition of a bright fluorescent pink pigment, this not only allowed to obtain a long-lasting color, but also to improve abrasion resistance.

The innovative **Super Tight Weave**

braiding technology provides a smoother, smaller and more homogeneous line structure.

Hence, the microN PE X4 line is thinner than the nearest competitors, and the smooth and

homogeneous structure of the braid gave a significant increase in the range of cast and sensitivity. The resistance of color to washout is not because of painting, as on many budget braided lines, but due to special impregnation with the addition of bright fluorescent pigment of pink color, it not only granted a solid color, but also improved resistance to abrasive.

size	#0.8	#1.0	#1.2	#1.5	#2.0	#2.5
mm	0.148	0.165	0.185	0.205	0.235	0.260
lb/kg	14/6.35	18/8.17	24/10.88	28/12.70	35/15.88	40/18.14
