Opis / Description

The Japanese offset hook Intech Tournament Jig-Rig Offset WMV-32SB is designed specifically for freshwater and marine predators, has an enlarged ear for better mobility on all kinds of installations, in particular jig-rig. The eye of the hook is made in such a way that the installation is as mobile as possible without extraneous use of mounting elements, in particular, winding rings. The shape of the hook is specially designed by our experts and is best suited for the use of both run-through and volumetric variations of silicone baits. The hook is made on modern equipment from high-strength calibrated steel.

The PTFE coating of the hook reliably protects against corrosion, the hook is maximally suitable for catching freshwater and marine predators, does not rust in edible silicone baits. This coating helps to improve the penetrating properties in the mouth of the fish, and the shape was chosen in such a way as to improve the detection and retention of the trophy on the hook.

Forged Barb hook sting increases the reliability and durability of sharpening, the hook remains sharp even after a lot of predator bites.

Made in Japan - produced at the Vanfook factory.

The hook sizes are best suited for ultralight and light fishing.

Hook #2 - has a length of 37 mm, the optimal choice for baits with a size of 3 inches.

Hook #4 - has a length of 33 mm and will be the best choice for baits up to 2.5-2.8 inches in size.

Hook #6 has a length of 31 mm and is perfect for baits up to 2.2-2.5 inches.

Hook #8 with a length of 24 mm is best combined with 1.5-2 inch baits.

SIZE		IN PACK
#2	37mm	6
#4	33mm	6
#6	31mm	6
#8	24mm	6

High Carbon Steel material - High carbon resilient steel, processed using Vanfook's patented technology, produces a thin hook that can stand high loads.

Blade: Forged Barb - Forged blade and barb technology increases sharpening strength and durability.

PTFE coating - a widely used technology for applying Teflon to the surface in Vanfook hooks, reliably protects against corrosion, and also improves penetration even into the bony mouth of a predator.

Enlarged ear: Big Eye - gives additional freedom when animating the bait on rigs like Jig Rig and Cheburashka.

The angle of attack of the hook is selected in such a way that, due to the design features, the implementation of bites is improved with a minimum time of contact with the fish.

The unique shape of the hook lift to the forend realizes a confident hold of the fish while playing.

The hook is exclusively made in **Japan**.
