

Daiwa Exceler 23 LT

Proizvođa / Brand:

Šifra proizvoda / Code: 77210

Raspoloživost / Availability: Na zalihi / In Stock

Cijena / Price: 90,00€

Opis / Description

The all new EXCELER LT – Daiwa uses a carbon fiber body called ZAION V. The new version is 3%-5% lighter than the previous EXCELER models. It also comes with an AIRDRIVE ROTOR & AIRDRIVE BAIL with a solid bail wire for its rigidity and resistance to bending during normal use, the thinner, smaller wire is also lighter, which reduces the weight of the rotation, thus reducing the weight of the reel.

AIR BAIL - Daiwa's innovative bail design features a hollow tubular stainless steel bail that delivers maximum rigidity and strength with minimum weight. Featuring a smooth protrusion-free design and construction line easily slides unencumbered along the Air Bail towards the line roller for trouble free line control.

AIR ROTOR - Lighter, stronger and more balanced than any rotor system that's come before, 'Air Rotor' delivers a great leap forward in rotor design and function and delivers the ultimate line roller support. Made from Zaion and featuring a redesigned arch that disperses pressure to the lower section of the rotor to reduce stressing and flexing, the design is further enhanced with a hollowed out construction reducing weight, while increasing reel sensitivity and rotational balance.

ATD DRAG - Daiwa's Automatic Tournament Drag uses an improved drag grease that exhibits a low viscosity at rest, yet becomes more viscous immediately after drag start up. This reduces initial drag start-up inertia and combined with the structural changes of the ATD Drag System results in a smoother drag from the initial hook up.

TOUGH DIGIGEAR - A further evolution of its predecessor Digigear, Tough Digigear is a brand new digitally designed, machine cut gearing system that ensures ultimate gear precision, rotational smoothness, and strength.
