Opis / Description

The 23? Fuego combines components from the new Airdrive Design with LT elements and the Magsealed structure.

The new Airdrive rotor leads to a weight reduction in the front unit of the reel and offers optimized balance for a decreased starting resistance. The low starting resistance leads to a better control at fishing, a higher sensitivity and an improved lure control. The new Airdrive bail is more lightweight than before, ultimately tough and significantly decreases the threat of tanglings in combination with the new bail arm. The powerful Tough Digigear works silky-smooth and is housed distortion-proof in the reel body made of Zaion V material. The Magsealed design reliably prevents the intrusion of saltwater and dirt particles over the shaft and leads to a long lifespan. The Twistbuster III design at the line roller is perfect for the use of braided lines: the braid doesn't get compressed during retrieving and less twist is the result. The new ATD Type-L drag cares for an even and optimized line release under strain without high starting resistance.

- ATD drag, full size button
- Bearings : 6
- Zaion V carbon body and rotor
- Long Cast ABS Aluminium Air Spool
- Cross Wrap
- One-piece screw-in ultralight Air Handle

Type of spool:

D - Deep spool

S - Shallow spool

C - Compact body spool (small body / large spool)

Gear ratio:

H - High gear ratio

XH - Speed gear ratio
