

Gosen Guidus X9 150m Purple

Proizvođa / Brand: Gosen
Šifra proizvoda / Code: 27729
Raspoloživost / Availability: Na zalihi / In Stock

Cijena / Price: 27,00€

Opis / Description

PE	0,6	0,8	1,0	1,2	1,5	2,0
mm	0,128	0,148	0,165	0,185	0,205	0,235
lb	15	19	24	27	33	46

Tune Your Feel - 9-strand braided PE line to sharpen your fishing

"Metallic Sensitivity" that sharply guides you to your next move - Highly elastic processing and a core-sheath structure minimize stretching, allowing you to detect even the most minute touches with a metallic feel!

"Overwhelming strength" perfected from the core - By implementing high-strength PE core fiber, strength is improved from the core, allowing for more aggressive styles using thinner sizes!

Silky smoothness creates a stress-free experience - The optimized braid angle reduces unevenness and cancels guide noise, allowing for stable reeling without stress!

Line Color - Available in three colors: multicolor (5 colors), light green, and purple.

Gosen employs its unique "Core-Shell Synchronize Design" in GUIDUS. By precisely synchronizing the elastic and yield characteristics of the core and shell materials, it creates high sensitivity that transmits even the slightest touch with a metallic feel. Furthermore, it exhibits outstanding durability against impacts and repeated loads with its overwhelming strength and energy absorption capacity. It realizes a unique core-shell

structure that fuses the core, which bears the main stress, with the shell, which absorbs and controls deformation.

Ključne karakteristike:

- Izuzetno visok modul elastičnosti omogućuje prijenos vibracija gotovo poput metala. Rezultat je **trenutna detekcija ugriza i bolja kontrola varalice**.
- Jedinstvena 9-nitna konstrukcija gdje su **jezgra (core) i vanjska pletenica (shell)** precizno usklađene.
- Posebna konstrukcija s **9 vlakana** daje optimalan balans snage, glatkoće i stabilnog oblika
- Nova struktura omogućuje znatno veću linearnu vrstou u usporedbi s klasičnim 8-strand PE linijama
- Zahvaljujući stabilnoj strukturi linija zadržava **gotovo savršeno okrugao profil** što donosi = manje trenja i manje petljanja.
- SG Processing obrada vlakana optimizira raspored molekula i povećava: snagu, otpornost, stabilnost strukture.
