Opis / Description

The Japanese fishing industry and pro anglers have taken the degree of specialization of Ultra-Light Fishing techniques to great lengths, in an effort to effectively target different species. If you are an Ajing, Mebaru, or Light Rock Fishing enthusiast, DUO has prepared the Tetra Works Starter Sets, which include a variety of lures, specializing in different Ultra Light fishing styles and Rockfish species.

The DUO Tetra Works Gomoku Starter Set comes in a durable Meiho, partitioned box and features a mixture of soft, silicone baits and Snip head jig heads.

The DUO SnipHead is a jig head developed with a completely original hook which has been hammered down in the middle of the shank. This serves numerous purposes such as:

- 1) Creates a flashing effect
- 2) The flat/wider section helps soft baits to remain on the hook
- 3) The specifically designed, inward facing, line-eye and the open gape helps anglers set hook with the least amount of effort.

The three sided, long tailed Grapper silicone lure, will impress you with its swimming action and its ultra-thin tail will become the perfect snack for number of rock fish.

The DUO Tetra Works Burny is a flat bodied, twin tail, silicone lure that creates a subtle vibration during retrieve. The Burny is a great allrounder, especially for fish that suck in their prey. During retrieve, the split tails come together, but they come apart when the retrieve is paused.

If an angler finds himself in a situation where fish does not seem interested, or get spooked by silicone baits, then the Gomoku Set offers flexibility, as it contains a Tetra Works Tetra Jig at 5 gr. The advantages of having the Tetra Jig in the DUO Starter Set

are that you can reach further, deeper and perform sharper twitches, than with your range of soft micro lures. Also if the weather conditions favor wind knots, then the center-balanced Tetra Jig will reduce line trouble and allow the angler to control the lure better.

Made in JAPAN
