Proizvo?a? / Brand: Bait Breath
Šifra proizvoda / Code: 75001
Raspoloživost / Availability: Na zalihi / In Stock

Cijena / Price: 12,00€

Opis / Description
Powder, 15 gr

Just a quick dab and you're ready to go!!
Instantly transform your worm into a UV-luminous lure! Formulated with amino acids!

Target Fish (Effective on): Also effective on horse mackerel, rockfish, black porgy, rockfish, greenling, flounder, and octopus!

Attract your target with light and flavor! Effective on a variety of fish species.
UV-COMBO attracts fish with its UV-luminous properties and specially formulated amino acids.
Effective on lures hiding in shade, even during bright daylight. UV rays are also present at night, and it's especially effective on moonlit days. Simply apply this product to your worms, developed through Bait Breath's research and development, to imbue them with UV-luminous properties and a powerful, fish-attracting, umami-flavored ingredient, setting them apart from the rest.

?How to Use?
It's easy to use!! Just attach the UV Combo to your worm!
Then, cast it!
Sprinkle it directly into the worm's package or worm case to coat the worm evenly.
Once applied to the worm, the effect is immediate. If you apply it before going fishing, all you have to do is put the worm on the hook and cast it. The effect becomes even more apparent once it comes into contact with the water. Also, depending on the worm, the reaction may be difficult to see with the naked eye, but you can check it with a commercially available black light.

Try experimenting with a variety of worm colors to find your favorite combination.
