Opis / Description

44 mm / 4 gr / fast sinking

After D-Contact and Direct, it is another long-awaited fast-sinking wobbler with increased weight. Designed for fishing for large trout in lakes and rivers, it works perfectly when fishing for other predatory fish. The tall, flat body of the bait shimmers beautifully when falling, reflecting light rays with holographic sides. Thanks to a specially designed rudder and precisely selected weight, the wobbler has a clear, well-perceptible work, which allows you to effectively fish with it both by twitching and leading the bait classically. The wobbler behaves perfectly both in a rushing current and in calm lake waters.

- With minimal travel distance, it can appeal for a long time and has a sharp, inertial flashing action with a large roll angle.
- Vibrating swim with high-speed reeling and a deep tracing range (about 20cm deeper than D-Contact with D-Incite 53)
- Equipped with a new concept lip that is thin and high strength. Excellent sharpness and water grip, it is suitable for all styles and fields, from upstream to downstream, slow pools, rapids, and small spots in small streams.
- The body design and center of gravity balance prevent wobbling and achieve a comfortable, long casting distance.
- Crafted with original potting eyes and a collaboration of different holograms.

This downsized model retains the core performance of the D-Incite 53. Its tracing range is about 10cm shallower than the 53, resulting in a noticeably lighter, more responsive feel and improved maneuverability, particularly noticeable during casting, twitching, and reeling.
