

Alcedo Viper

Proizvođa / Brand: Akami

Šifra proizvoda / Code: 78201

Raspoloživost / Availability: Na zalihi / In Stock

Cijena / Price: 43,00€

Opis / Description

The Alcedo Viper reel is the perfect choice for anglers looking for a versatile and high-performance tool, ideal for spinning and other techniques in both freshwater and saltwater. With a solid and durable construction, the Viper is designed to handle the toughest challenges, ensuring reliability and long-lasting performance.

The anodized aluminum spool is not only lightweight but also provides superior corrosion resistance, essential for withstanding marine conditions where humidity and salinity can compromise the lifespan of fishing equipment. This coating ensures the reel stays in top condition, even after prolonged use.

Equipped with a waterproof drag system, the Viper protects its internal parts from dust and water, maintaining maximum efficiency during each use. The shielded Japanese bearings, known for their precision and durability, ensure smooth retrieval and perfect control, even with particularly fighting fish.

The aluminum alloy construction gives the reel great strength and lightness, optimizing maneuverability and balance during fishing. The carbon multi-disc braking system ensures a consistent and gentle drag, ideal for handling larger fish. Additionally, the infinite anti-reverse mechanism prevents unwanted handle movement, providing maximum control.

With an ergonomic, non-slip handle, the Viper allows a firm and comfortable grip, reducing fatigue during long fishing sessions. This reel is ideal for the most demanding anglers who seek a tool that combines high performance and durability in any condition.
